

Memo

To: All Affected Entities
From: Chief Kevin Nord
CC:
Date: 1/21/2020
Re: **Ki Program Cessation**

Please be advised that the Duxbury Emergency Management Agency (DEMA), effective immediately, will cease the potassium iodide (KI) program and no longer replenish KI. This decision is based upon data received from the Commonwealth of Mass, Department of Public Health, Radiation Control Program.

On January 14, 2020, a memo was received regarding the guidance behind the cessation. Briefly, Pilgrim Nuclear Power Station (PNPS) ceased operating on May 31, 2019. DPH has determined there is no longer a risk of exposure to radioactive iodine from the plant. Therefore, DEMA will no longer support the program.

Please destroy any permission cards for students. Disposal of KI can be safely disposed of in the municipal solid waste. KI is a salt and does not require prior treatment or disposal through traditional medication take-back programs.

Any questions please contact the Office at 781-934-7159

Director, Radiation Control Program

Subject: Potassium Iodide (KI) Information for Communities Surrounding the Pilgrim Nuclear Power Station

This memorandum is intended to provide important information to communities within the Pilgrim Nuclear Plant Emergency Planning Zone (EPZ), Cape Cod, Martha's Vineyard, and Nantucket.

This memo provides an update on the use and supply of potassium iodide (KI), which is a protective measure to minimize uptake of radioactive iodine by the thyroid gland in the event of a release of radioactive iodine from an operating nuclear power plant.

As you know, the Pilgrim Nuclear Plant ceased operating on May 31, 2019. As of August 2019, there is no longer a risk of exposure to radioactive iodine from the plant. As a result, the U.S. Nuclear Regulatory Commission and the Federal Emergency Management Agency informed the Massachusetts Department of Public Health that KI is no longer necessary. Given this, DPH will not replenish KI for the communities in the Pilgrim EPZ, Cape Cod, or Islands.

Please note that potassium iodide is a salt and can be safely disposed of in municipal solid waste. It does not require prior treatment or disposal through a pharmaceutical take-back program.

If you have any questions, please contact Mario Iannaccone, Emergency Plan Supervisor for the Radiation Control Program, at 617-242-3035.
