

Digitize a Cassette Tape to PC

Step 1: Setting up the cassette.

1. Turn on the machine. The Power Button is in the lower-left corner.
2. Push Eject to open the cassette holder.
3. Place cassette into holder and close door.
4. Rewind to beginning of tape or where you want to start converting.

Step 2: Converting Tape to MP3

1. Make sure the Tape2PC machine is connected to the Macbook Pro using the USB cord.

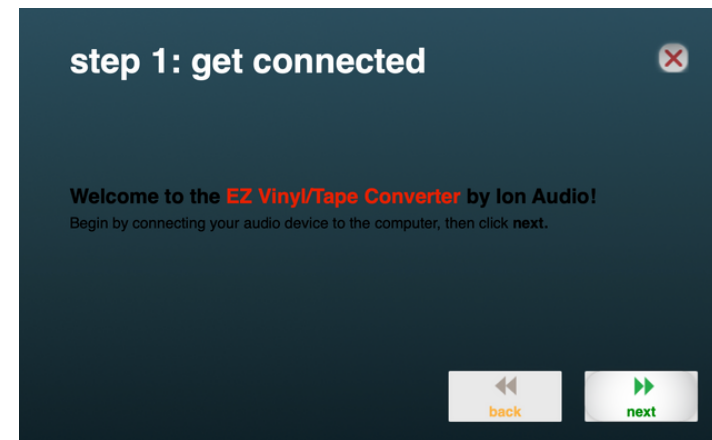

2. Open **EZ Vinyl Converter**.

a. The name is misleading. This software transfers cassettes to a computer.

3. Click **Next** at the bottom right hand corner of the screen.

4. Press **play** on the Tape2PC machine.

5. Look at the Macbook Pro Screen. If there are 2 green bars moving, you know the Tape2PC machine is connected to the Macbook Pro.

6. Rewind cassette to the beginning.

7. Click **record** on the Macbook Pro and *press play* on the Tape2 1PC machine.

Step 3: Last Steps

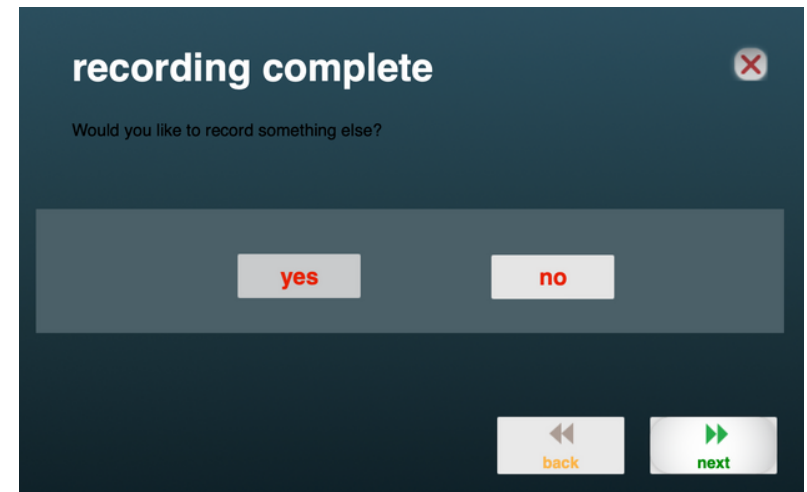

1. Wait until tape is finished playing and *click* **Next**.
2. Fill in any relevant information and *click* **Next**.

A dark blue rectangular form with three white input fields. The first field is labeled 'Artist:' in red text. The second field is labeled 'Album:' in red text. The third field is labeled 'Track title:' in red text.

3. To record another tape, *click* **Next**.
4. If you are **finished** recording, *click* **the X** at the top right of the screen.
5. EZ Software will ask "Would you like to quit and abort your recording now?"
 - a. Click **Yes**. You will not lose your recording.

6. To find your recording, open the **Music app** on the Macbook Pro.

7. Now you can burn the music to a CD and/or save to a flash drive.
